

What Sets Us Apart

From every fibre of your being to ours, by connecting with Vox you are guaranteed effective lead times and turnarounds, where you can stay up-to-date with today's competitive market trends. Still on the fence about making a move? Here's why we're the provider of choice for businesses ranging from SMEs to corporates:

Cost-Effective

Fibre typically costs less to maintain, has less downtime, and requires less networking hardware than DSL lines. Your business will benefit from a solution that offers significant cost savings when you consolidate your voice, video and data over one connection.

Customisable & Scalable

Whether you're in need of an all-in-one voice and broadband data bundle, or a bespoke solution – our fibre options can be customised and are scalable, providing much higher uplink speeds than DSL.

Fast & Flexible

Fifty times faster than a standard copper connection, Y2K fibre is also flexible as bandwidth can be quickly upgraded when needed. We install a 1Gbps port, and offer capacity ranging from 10Mbps to 10Gbps.

Secure

Because fibre is made from glass or plastic, unlike copper, you're less likely to be affected by theft. Logistically, it declutters your workspace as you can put all your electronics and hardware in one central location.

Higher Reliability

Glass is more reliable as a data conduit than copper, which means that fibre is at far less of a risk of disconnects and downtime. Y2K takes this a step further with the implementation of comprehensive SLAs, with options ranging way up to a 100% uptime guarantee. We use two independent connectivity routes, which ensures that you stay connected in the rare instance of a fibre line fault.

Superior Backbone

With over 13 national – and two international – PoPs, our next-generation backbone has been built and maintained to deal with any event. It's the perfect platform for the applications and services core to your business, including cloud-based services.

Versatile

Setting the benchmark in terms of convergence, Y2K Fibre guarantees you better Quality of Service (QoS) for each application, without sacrificing service performance or quality.

Benefits of Y2K Fibre

- 24/7/365 support and monitoring.
- All fibre services are deployed on infrastructure owned and managed by Y2K
- Our solutions are tailored to adapt and grow with your requirements.
- Y2K Fibre offers the ideal platform to move applications and services to the cloud, giving you the right connection for reliable and high-quality access.
- The Y2K Fibre network is available nationally. Our aggressive rollout strategy ensures continued expansion.
- Our customers are assigned designated account managers to work with you and understand your unique business needs.
- Unmatched reliability backed by optional SLAs, guaranteeing up to 100% uptime. Dual route and custom redundant builds are also available.
- Our fibre network is underpinned by an established, superior national and international backbone.
- With over 13 local Points of Presence (PoPs) and footprints in all the Teraco environments, our national ring provides unmatched resilience.
- Our international network runs over multiple cable systems and terminates in two separate PoPs in London.

Y2K CONNECT
GET CONNECTED

An Evolution in Motion

Thanks to the growth explosion of interconnectedness, the companies with the best communication services win. To stay relevant and competitive, your business needs fast, reliable and secure fibre: the future of digital data communication in South Africa. Don't get left behind!

Fibre is no longer a luxury but a necessity in your business. From communicating with clients via video or voice conferencing, to banking, and capitalising on cloud-based storage – you can't afford to be without it.

Y2K Fibre opens the door to this new generation of connectivity. Our end-to-end fibre optic connection over an established, high-speed network (from 1 Mbps - 10 Gbps), allows you to bring data, voice, video and IP-based products together into a converged solution for your business. In-turn, productivity will increase and you'll save money by getting all your communication needs met.

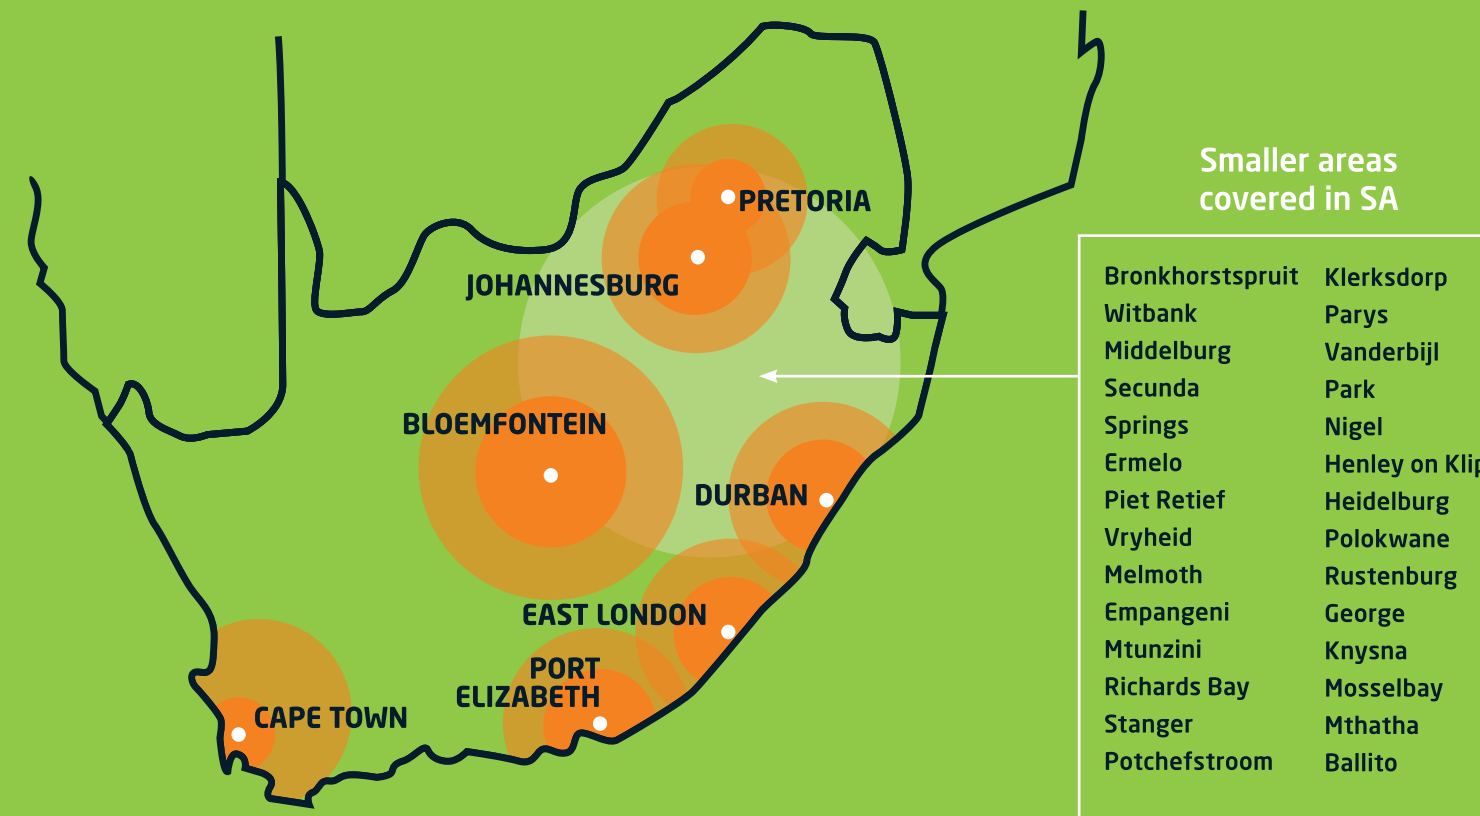

Able to connect any-sized business

Stable, reliable, and made to move – Y2K Fibre gives your business guaranteed uptime 24/7/365

Y2K is committed to getting the job done, and putting our customer's needs above our own. As a market leading end-to-end digital solutions partner, we use our expertise and cutting-edge technology to bring our clients an extensive range of communication, infrastructure and application services across a resilient national and international network. Innovation, customer support, and the delivery of superior products catapult us into a league of our own. No matter what your connectivity needs, we've got you covered!

Hello South Africa

The people of South Africa deserve great broadband – and we're committed to providing it. That's why Y2K's over 1500 employees are working endlessly to give fibre the quickest possible rollout on a national level – and beyond!

To-date, the Y2K Fibre network is available in all major cities throughout SA, with our footprint gaining momentum rapidly. Our current reach includes: Johannesburg, Pretoria, Cape Town, Durban, Port Elizabeth, East London and Bloemfontein, and is currently underway along the Eastern belt of the country, extending from Bronkhorstspuit, Witbank through Middelburg, Secunda, Springs, Ermelo, Piet Retief, Vryheid, Melmoth, Empangeni, Mtunzini, Richards Bay, Stanger and Ballito.

We also supply fibre to countless buildings in pre-fibred areas and business districts, positioning us as one of the largest fibre operators in the country.

Consolidating services across one connection means a faster, easier-to-manage network

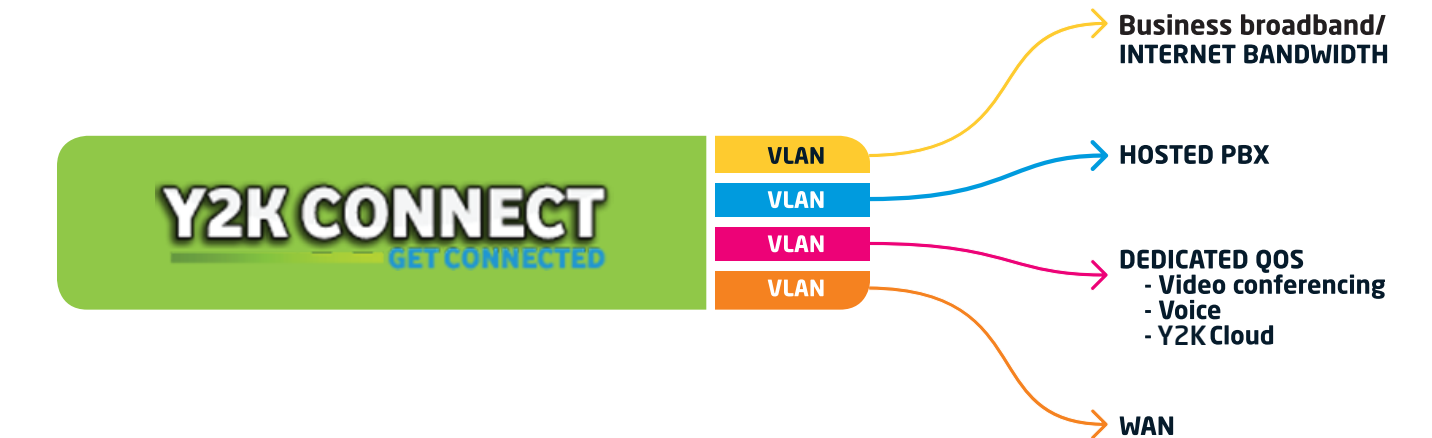

How It Works

In today's fast-paced world, speed is everything – time saved is money saved. And because no one knows this better than Y2K, we've ensured that our fibre offers you the best experience on the market as well as complete peace of mind. Upload and download in seconds, stream instantly, say goodbye to buffering for good, and hello to an unlimited connection.

Our world-class network is supported by an established, superior national and international backbone with full redundancy. Y2K fibre is provided as a

dedicated gigabit fibre connection, allowing you to start with the basics and scale up as your business grows.

Based on your exact requirements, we allocate the available capacity using separate, secure virtual circuits for your voice, video and data applications. This gives your business a future-proof converged solution – essential for the rising trend of the Internet of Things (IoT) – resulting in your infrastructure costs plummeting.

What We Offer

Y2K Fibre is not only cost-effective, but superior to every other connection on the market. Offering everything from simple, dedicated 1:1 services, to inter-branch connectivity between multiple locations – our fibre broadband packages have been specially designed to give you the best value for money, whilst simultaneously meeting your need for speed.

Y2K Fibre Retail Bundle*

If you're in the retail space or own a small business, and you're looking for a reliable and affordable internet and voice services solution, then the Y2K Fibre Retail Bundle is for you. These bundles consist of high-speed asymmetrical fibre connectivity, low contention ratios, uncapped broadband internet, and inclusive and optional hosted PBX and voice services.

What You Get:

- Uncapped broadband internet
- Speeds ranging from 1 Mbps to 20 Mbps
- Hosted IP PABX

* Available to specific coverage areas only

Business Broadband Bundles

We understand that high-speed and a reliable internet connection is critical to a small-to-medium business' evolving needs – and Business Broadband delivers just that. Coming in uncapped and capped high-speed options, the broadband bundles include a selection of beneficial value-added services, various SLA options, and other product-enhancing features – it's little wonder why it's one of our most popular offerings.

What You Get:

- Uncapped and capped broadband internet
- Speeds ranging from 20Mbps to 1Gbps
- Hosted IP PABX
- Uncapped Voice
- Mobile Data

Dedicated Services

An uncontended, dedicated option that hosts all the services and applications offered by Y2K – our Dedicated Service solution is the ideal platform for a converged service. You can create multiple, secure virtual circuits over a single connection, and maximise the available capacity of your fibre link.

What You Get:

- Dedicated 1:1 fibre line
- Speeds ranging from 10Mbps to 10Gbps
- Secure virtual circuits to separate voice, video and data
- Dual fibre route (optional)
